Demonstration and Evaluation Content

Demonstration and evaluation content comprises: Utilizing a signaler or a spotter when required; Proper personal protective equipment or also referred to as P.P.E. as needed; Using the proper fitting harness or fall arrest devise; Making use of a lift only on solid and level ground; Using the lift with all other workers clear of the job place; Aware of load limits etc. and other specs as set out by the manufacturer; Having all associated equipment stored safely on the lift platform; Pre-shift work area survey and equipment inspection; Isolating off the work place when major work projects are to be completed; and ensuring a smooth and safe operating speed for various plant conditions

Each and every person would be tested to make certain they can efficiently and safely operate your site-specific equipment.

Manlift Safety

Manlifts could be really dangerous machinery since they are capable of lifting a worker 20 feet or higher in the air and that creates a particular amount of danger. Because the danger is so apparent, lift operators and owners are careful to properly maintain their machines and follow correct operating procedures and safety precautions. The ratio of accidents involving this particular apparatus is fairly low.

The safety specifications for scissor lifts and boom lifts puts the burden for safe manlift operation on the user. You are responsible for knowing how to safely use the lift even if you only rent the equipment for one day. The most basic safety features on the equipment are safety decals and the operating manual. These show essential information about the maintenance, operating procedures and safety machinery.

A new model of manlift would come with the required decals in place and operating guidebooks. The operating guidebook must be found on the equipment at all times. If you are buying a used lift, it is important to ensure that the instruction manual is included and that important decals haven't been painted over. The restraints that prevent operators from falling and the guardrails are other essential safety features. These are standard and mandatory on all kinds of lifts.
