

## **Aerial Lift Train the Trainer Kitchener**

Aerial Lift Train the Trainer Kitchener - The Aerial Lifts Train the Trainer Certification Program would teach trainers how to efficiently train operators in safe industrial mobile machinery operation. Trainers are provided with in-depth instruction on aerial lift equipment. The program is provided on an open enrollment basis and delivered at select training sites. Prior to certification, trainers are evaluated and graded based on their demonstrated skills and understanding.

The Aerial Lifts Train the Trainer Certification Program emphasizes practical learning. As the number one training provider in the business, we give the best hands-on training possible through opportunities to practice concepts and techniques learned within the classroom. In addition to hands-on experience, trainers develop general knowledge of instructional methods and equipment theory, classroom and field communication skills, and ability to efficiently train and assess operators. Trainers would gain an understanding of what traits make a successful trainer.

The Aerial Lift Train the Trainer Certification Program teaches the instructional methods involved in communicating concepts in a classroom and/or field condition. Knowledge requires a training component to be efficient in workplace situations. There are three aspects of machine operation that the trainer must learn how to convey to operators: what to perform; how to do it; and the reason why it should be carried out.

The program offers detailed, up-to-date reference material in order to help trainers convey the subject matter to equipment operators. Manuals include detailed information on all aspects of industrial mobile equipment operator training. Incorporated within the package are training aids which provide a visual reference in order to improve the learning experience. The equipment-specific training products include necessary materials for both the operator and the trainer: videos/DVD's, overhead transparencies, kinds of equipment, safety message posters; stability pyramids and digital training aids.
